

PRITECH - React Native Technical Task

Junior / Junior-Mid Developer

React Native

Mobile App

Technical Task

Task overview

Build a simple React Native mobile app that allows a user to manage a small list of personal tasks. The purpose of this task is to check basic React Native knowledge, logical thinking, code organization, and UI implementation.

Requirements

- Task list screen
- Add new task
- Mark task as completed / not completed
- Delete task
- Simple task details view
- Basic input validation
- Clean and simple UI
- Fetch data from a public API and use it in the app (candidate's choice)

Task data

Each task should have the following fields:

Field	Description
Title	Task title entered by the user.
Description	Short task description entered by the user.
Status	Completed or not completed.
Created date	Date when the task was created.

Technical expectations

- Use React Native with JavaScript or TypeScript
- Use functional components
- Use hooks

- Keep the code clean and organized
- Use reusable components where needed
- Handle empty states
- Avoid unnecessary complexity

Bonus

- Search tasks by title
- Filter tasks by status
- Store tasks locally on the device
- Add simple navigation between screens

Deliverables

- Git repository link
- README with setup instructions
- Short explanation of what was implemented
- Screenshots or a short screen recording

Evaluation

- Basic React Native understanding
- Logic and problem-solving
- Code structure
- UI clarity
- Component usage
- Ability to complete a simple practical task

Submission note

Please make sure the project can be run locally using the instructions provided in the README. The repository should be public.
